

**AMENDMENTS TO THE SPECIFICATION**

Please amend the paragraph beginning on line 13 of page 7 as follows:

The housing assembly 18 includes a reflective portion 34 integrally formed on the inner surface 42 of the shell 20, and in particular the reflective end wall 26. In this example, the reflective portion 34 is a plurality of partial cube-shaped members 36 arranged in a grid pattern and referred to in the art as “cube corners.” Similar to a prism, a side of the cube-shaped member 36 forms an angle with a plane of the roadway 12, such that a light beam is reflected back to the eyes of a driver. An example of a cube corner type reflective member is disclosed in U.S. Patent No. ~~3,332,357~~ 3,332,327 to Heenan; U.S. Patent No. 3,409,344 to Balint; and U.S. Patent No. 3,984,175 to Suhr, the disclosures of which are incorporated by reference.

The abstract of the disclosure has been amended as shown on the attached sheet.
